

Then, I will talk about my disadvantage. There is one thing that I have to admit is that I did not finish the part that I assigned by my team on time. Therefore, my teammate can not finish their parts easily.(because lots of parts are connecting)By the way, my coding did not have such strong readability. I still need to improve it in the future. That makes my documents reads not so fluently and comfortable.

```
// update new log of mrX
ImmutableList<LogEntry> newLog = log;
if (mover.isMrX()) {
    ImmutableList.Builder<LogEntry> logBuilder = ImmutableList.builder();
    logBuilder.addAll(log);
    if (move instanceof SingleMove) {
        SingleMove single = (SingleMove) move;
        boolean reveal = setup.moves.get(log.size());
        logBuilder.add(reveal ? LogEntry.reveal(single.ticket, single.destination)
            : LogEntry.hidden(single.ticket));
    } else if (move instanceof DoubleMove) {
        DoubleMove dm = (DoubleMove) move;
        boolean reveal1 = setup.moves.get(log.size());
        logBuilder.add(reveal1 ? LogEntry.reveal(dm.ticket1, dm.destination1)
            : LogEntry.hidden(dm.ticket1));
        boolean reveal2 = setup.moves.get(log.size() + 1);
        logBuilder.add(reveal2 ? LogEntry.reveal(dm.ticket2, dm.destination2)
            : LogEntry.hidden(dm.ticket2));
    }
    newLog = logBuilder.build();
}
```

For example, like the screenshot above. When I do the updating log operation in advance method, lots of coding get so close which make person feel bad at the first time. Maybe I will make it wider after this experience.

All in all, It is interesting for me to finish coding with my team and it is obviously a happy and exciting journey for me to cooperate my teammates. We try our best to finish all test in cw-model task. Although we do not have enough time to finish cw-Ai task which is the next step for the coursework, I still be proud of our work and my teammates. Thanks for the action that he teach me how to use steams operation more conveniently steps by steps.
